

Trust Transformation & Accessibility Transformation

The Complete Instrument Set — Every Instrument, Named

Every instrument below is live, built, and running — 475 in total. Each entry names what it does. Where a trust protection applies the same way inside accessibility, that's stated directly rather than left out.

1. Standing to Be Believed

- **The Voice Instrument.** Puts a person's own account of their life on the record, in their own words, independent of anything a guardian, trustee, or organization has filed. Runs the same way for a dependent in a trust and a person navigating an accommodation.
- **Belief by Default.** Treats what a person says as true unless there's actual reason to doubt it — never the reverse.
- **Self-Diagnosis.** A person names and describes their own condition or situation in their own terms.
- **Insight, Held as Real.** A person's own read on their situation is never dismissed as instability, delusion, or unreliable simply because it's inconvenient.
- **Discernment.** A person's own judgment about people and situations stands on its own, not overridden by someone else's assessment.
- **Freedom from Others' Opinions.** A person lives and decides according to their own judgment, not according to what others think of their choices.
- **Genuine Comprehension Verification.** Checks whether a person actually understood a disclosure — not just that they were shown one.

2. Authority, Consent & Decision-Making

- **The Chain-of-Custody-of-Authority Instrument.** Tracks exactly who has authority over what, granted by which document, on which date — and whether it's ever been reviewed.
- **Authority Availability.** Confirms, at every decision, whether the person deciding actually held real authority in that moment.
- **Power of Attorney, Held to Scope.** Tracks exactly what a POA covers and catches the

moment it's stretched past that.

- **Language Drift Detection.** Catches the moment a person or asset gets described differently across documents over time — a status quietly changed by relabeling instead of by an actual decision.
- **Notice-and-Silence Classification.** Every silence gets classified in real time: wasn't told, no requirement to tell, or told but undocumented — never left ambiguous after the fact.
- **Conduct-Pattern Tracking.** A trustee's or staff member's actions get tracked across years, catching patterns no single transaction reveals alone.
- **Successor Readiness Check.** An incoming trustee has to demonstrate real understanding of the trust's actual history — not just sign for a handoff.
- **Capacity and Consent Verification.** Documents what capacity a person actually had at the moment of every major decision.
- **Third-Party Pressure Detection.** Gives staff and family an independent channel to report pressure they've received — pressure that would otherwise leave no trace.
- **Conflicts, Named Before They Decide.** Anyone with a personal or financial stake in a decision discloses it first — and steps back from making it.
- **Two Jobs, Two People.** Separates who oversees welfare from who manages money, even when practical necessity keeps both with one person.
- **The Approver.** Gives a person real, final say over decisions made about them.
- **Approval Authority Over Institutional Decisions.** Extends the same real approval authority to policy-level decisions, not just individual ones.
- **Consulted First, Not Informed After.** Decisions get brought to the person before they're finalized, every time.
- **Medical Decisions, on Record.** Documents who actually made a medical call and whether the person's own wishes were sought and honored.
- **Ethical Healthcare Decisions.** Choices about care follow a person's own values, not an institution's substituted framework.
- **Own Health Team.** A person chooses the providers they're actually comfortable with.
- **Own Priorities in Health Information.** What a person is told first about their own health follows their stated priorities, not a standard checklist.
- **Decision-Maker Availability.** Confirms who actually held authority at any given moment, catching gaps filled informally by whoever happened to be around.

3. Records, Evidence & the Real Story

- **The Witness/Corroboration Instrument.** Gathers real, independent, outside evidence

— never self-reported by whoever's being checked.

- **An Evidence Record Nobody Can Rewrite.** A person's own independent record stays theirs, immune from being "corrected" or absorbed by whoever administers their affairs.
- **Personal Records, Protected.** A person's own files, writing, and history stay technically and legally theirs — exportable, not folded into someone else's system.
- **One Real Timeline.** Pulls scattered documents across decades into a single, authoritative chronological account.
- **A Baseline That Existed From Day One.** Captures what a trust's assets or a system's accessibility actually looked like at founding or launch, so later drift has something real to be measured against.
- **Forgery and Irregularity Detection.** Flags signatures, dates, and notarizations that don't check out, routed to real forensic review.
- **Every Promise, in Writing, Same Day.** Verbal commitments get written confirmation the day they're made — never left to memory.
- **Expectation vs. Entitlement.** Tracks what a person was actually told against what a document legally promises, closing the gap where disputes usually start.
- **Standing Public-Record Checks.** Runs a person's name and related entities against county and court records on a recurring basis.
- **Litigation Exposure, Sorted.** Separates genuine misconduct from unrelated legal noise that happens to name the trust or business.
- **A Full Legal History.** Tracks every attorney a person has tried to retain, including the ones who were dismissed or declined.
- **Why It Started, Preserved.** Captures the reasons a trust was formed, or an accommodation was first put in place, before the people who remember are gone.
- **A Running Personal Record.** Captures a person directly, in their own words, on a recurring schedule.
- **Meeting and Disclosure Logging.** Tracks whether promised family meetings or disclosures actually happened, and what was actually said — not just who attended.
- **Characterization, Caught at the Moment It Becomes a Decision.** Logs exactly when a description of a person stopped being mere observation and became the basis for a real decision about them.

4. Communication & Voice

- **Heard Directly, No Translation.** A person capable of speaking for themselves gets addressed first — never spoken over out of habit.
- **Open Lines.** Protects a person's ability to reach family, friends, and the outside world

without their contact being filtered.

- **The Right to Ask.** Questions about one's own affairs are legitimate, full stop.
- **A Real Answer to "What's Going On."** A person is entitled to be told, clearly and specifically, what's actually happening with their own affairs.
- **Clarity, Not Ambiguity.** Explanations are tested for whether they're actually usable, not just technically provided.
- **Contact on Your Own Terms.** A person decides how, when, and through what channel people reach them.
- **No Hidden Rules.** Nobody gets held to an expectation that was never actually stated.
- **Protected from Hearsay.** Decisions and reputation get built on verified fact — never rumor, gossip, or unfair characterization left untagged in a file.
- **Own Language of Obligation.** A person determines, in their own words, what they actually owe and to whom — never an obligation imposed as self-evident.
- **Rights, Actually Communicated.** People are told what they're entitled to, not left to already know to ask.

5. Autonomy & the Capacity to Act

- **The Right to Say No.** A decline stands as a decline — never evidence that something's wrong with the person declining.
- **The Right to Change Your Mind.** A revised decision is a real update, never proof of confusion.
- **Room to Be Wrong.** One honest mistake never becomes grounds for reduced standing.
- **Autonomy, Safety, and Free Will.** The foundational rights every other instrument in this set protects — checked directly, not assumed.
- **Room to Fail.** A person can try something and have it not work out without that becoming leverage over unrelated parts of their life.
- **Learning From Failure.** A person's own process of trying, failing, and trying again is protected from being used against them.
- **Planning Ahead.** A person's own future plans get real space, never redirected back to only what's immediately in front of them.
- **Human Future Planning.** A person can plan around possibilities that don't yet exist, not just what's already proven.
- **Promise, Dream, Idea, and Insight Protection.** Protects a person's standing capacity to make commitments, hold ambitions, originate ideas, and act on their own insight.
- **Actual Rest.** A person gets time that isn't monitored, evaluated, or managed.

- **Unstructured Time.** Time that isn't filled with someone else's idea of a productive activity.
- **Room to Be Inconvenient.** A need that costs someone else time is still a legitimate need.
- **Solitude and Silence, Respected.** Withdrawing or not responding is never automatically read as a problem.
- **The Right to Be Unavailable.** A single instance of nonresponse is never treated as noncompliance.
- **Your Own Standard.** A person holds themselves to whatever standard they choose.
- **Room to Be Unusual.** Being eccentric is never evidence of incapacity.
- **Room to Disagree.** Pushing back on a professional's assessment never counts against a person.
- **Oversight That Matches Real Need.** The level of control applied to a person is actively reassessed, never set once and forgotten.
- **Own Definition of Focus.** A person defines what focus and attention mean for themselves.
- **Prioritizing Simple Pleasures.** Small, ordinary pleasures are tracked and protected — never rationed or treated as frivolous.
- **Own Learning Style.** A person learns in the way that actually works for them, with real, equally supported alternatives.
- **Self-Directed Learning.** A person directs their own path, at their own pace, using their own method.
- **Service and Design-Based Learning.** Learning through building and serving counts as real learning, on equal footing with any other method.

6. Relationships & Family

- **New Trust, Allowed.** A person can form new relationships over time — isolation never gets to call itself protection.
- **Relationships, Protected from Interference.** A trustee's reach stops at operational logistics — it never extends into who a person is allowed to be close to.
- **Abuse Patterns, Actually Tracked.** An independent channel tracks how a trustee treats a person's relationships over time.
- **Children, Shielded.** A person's relationship with their own children stays theirs to raise, free of a trustee's interference.
- **A Family, on Your Own Terms.** Building and raising a family happens entirely according to a person's own choices.

- **Choosing Your Own People.** A person chooses their own help, health providers, advisors, mentors, and influences — every one of them, independently.
- **Support for the Support Person.** When someone brings a companion into a process, that companion's own needs are accounted for too.
- **Continuity Across Caretakers.** A person's stated wishes carry forward across every change in who cares for or administers their affairs — no new caretaker starts from a blank slate.

7. Work & Creation

- **Work of Your Own Choosing.** A person takes on work, and gives help to others, entirely on their own terms.
- **Your Work, Defined by You.** What a person's work means is decided by the person doing it.
- **The Founder's Shield.** A venture is protected from interference motivated by a person's dependent status — full stop, never a blanket exemption from ordinary accountability.
- **Continuity Through Interruption.** A gap in activity is never read as abandonment.
- **Return Without Penalty.** A person returns to their work after an interruption without losing standing.
- **Build Without Asking.** A person starts and builds whatever they choose, on their own initiative — no retroactively invented permission requirement.
- **Work That Stays Yours.** A person's own work can't be taken, claimed, or dismissed by anyone managing their affairs.
- **A Venture Kept Separate.** A person's own business and its records stay entirely apart from the trust that supports them.
- **Independent Legal Foundation.** A person independently determines the legal steps their own ventures, dreams, and ideas are built on.
- **Production Verification.** A person can get real, verifiable proof that something they made was actually made by them.
- **Process as Intellectual Property.** A person's own working methods and techniques are protected as their own.
- **Independent Patent Pursuit.** A person independently pursues patent protection for their own inventions.
- **Independent Incorporation.** A person independently forms companies and business records.
- **Design as Its Own Activity.** Design is valued as a real activity in its own right, not only

as a means to some other end.

- **New Kinds of Work.** A person can invent and define types of work that don't fit any existing category.
- **New-Work Security.** A person gets real security around forms of work that are still emerging.
- **Co-Creators of Your Choosing.** A person brings in whoever they choose to build alongside.
- **Collaborate With Whoever You Choose.** No approval required to decide who a person works with.
- **Shade Trees for the Next Generation.** A person can invest in things that only benefit their children years from now, without needing that value proven today.

8. Financial & Asset Protection

- **The Rights Inventory Instrument.** Maps every domain of a person's life and states plainly what's actually still theirs, what's dormant, and what's been quietly absorbed.
- **The Erosion-Tracking Instrument.** Watches every new decision made on a person's behalf and catches the small, individually unremarkable overreaches before they add up to something serious.
- **The Restoration Pathway Instrument.** For every right that's been lost, states the concrete step to get it back.
- **No Blending of Funds.** Trust assets and a trustee's or business's personal assets are tracked separately, with any crossing flagged immediately.
- **Debt and Encumbrance Tracking.** Every lien against trust property is logged and checked against its stated purpose.
- **Self-Dealing Detection.** Transactions where the trustee is also the counterparty — directly or through an intermediary — get caught and checked.
- **Fair Value, Every Time.** Distributions and valuations are checked for fairness period by period, never just averaged across decades.
- **Trustee Fees, Watched.** What a trustee pays themselves over time is tracked against actual, documented work.
- **What Was Always Yours, Stays Yours.** Property and money owned before or independent of the trust never quietly becomes trust property.
- **Your Own Risk Tolerance.** A person's standing to make their own high-risk or unconventional financial choices is protected.
- **Access, Reviewed Regularly.** Who has access to which accounts, and when that access was granted, gets checked on a standing basis.

- **Your Own Understanding, Secure.** A person's information stays theirs to control, and their own understanding of their own experiences can't be redefined by anyone else.
- **Tax and Compliance Filing Tracking.** Required filings are tracked for lateness as a pattern, never judged one at a time.
- **Property Condition and Use.** Real estate held in trust is checked, recurringly, for whether use and maintenance still match the trust's actual intent.
- **A Trust That Can't Go Quiet.** Catches the moment a trust stops being genuinely administered, even while it looks active on paper.
- **Cross-Entity Tracking.** Follows assets when they move between related trusts or business entities, so structure can't be used to obscure where something actually is.
- **A Real Reversal Path.** Specifies, in advance, what it would actually take to unwind a wrongly made decision.
- **Digital and Modern Asset Coverage.** Extends full protection to accounts, devices, subscriptions, and digital records — no exemption because a vendor built the platform.
- **Own Assets and Security, Defined.** A person's own definition of what their assets and security actually are is protected, even against a competing definition written by someone else.
- **Own Value of Time.** A person's time is recognized on their own terms, never treated as available by default because someone else manages their affairs.

9. Dignity & Identity

- **Help Framed as Dignity, Not Rescue.** How help is offered and described gets checked against a real standard, never left to policy language alone.
- **The Rescue Narrative, Named.** The specific pattern of framing help as rescuing someone from being "the problem" gets caught and named directly.
- **Whole-Person Standing.** A person's need is one fact about them — never their whole identity.
- **No Distortion, No Erasure.** A person's character can't be misstated, and their identity can't be reduced to "the case being managed."
- **Value Sovereignty.** A person holds their own values, even where they differ entirely from the institution around them.
- **No Reduction, No Foreclosed Future.** A person is never treated as just one label, and their future is never assumed fixed by their past.
- **Meaning, Never Dismissed as Pointless.** A person's efforts and care are never treated by others as not worth taking seriously.
- **No Cruelty Disguised as Care.** Any pattern of control gets routed to independent

review before it's accepted as reasonable discipline.

- **No Giving Up on Someone.** The belief that nothing can change a person's situation never gets to justify simply stopping the effort.
- **Freedom from Manipulation.** A person's emotions and decisions can't be deliberately manipulated by whoever manages their affairs.
- **Freedom from Gaslighting.** A person's own perception of what actually happened can't be denied or distorted by anyone.
- **Freedom from Libel and Slander.** False, damaging statements about a person get a real defamation-standard review.
- **Your Own Name, Not a Label.** A person is identified by their own name in every system — never routinely reduced to "the dependent."
- **Heard on Your Own Terms.** A person's communications default to assuming their competence.
- **Recognition and Credit.** What a person contributes gets credited to them specifically — never quietly folded into "the family's" or "the team's" account.
- **Celebration, Actively Practiced.** Achievements and good news get genuinely marked, not left unmarked because attention stays on needs.
- **Privacy of Thought.** A person's private reactions and opinions can't be treated as automatically reportable.
- **Real Privacy.** Monitoring has an explicit, disclosed scope — it doesn't expand into surveillance just because oversight exists.
- **Grudges and Forgiveness, on Your Own Timeline.** A person's own process of anger and forgiveness is never rushed by someone else's comfort.
- **Own Legacy.** A person decides, independent of any institutional narrative, what they want to be remembered for.
- **Private Practice, Protected.** A personal discipline pursued away from evaluation stays genuinely private.
- **Naming Scripted Language.** A person can name and challenge language that functions to conceal what's actually happening, even repeated phrasing counts as evidence.
- **Full Citizenship.** A person is recognized as a full citizen with all that implies, regardless of dependent status.
- **Civil Liberties, Held to the Legal Standard.** Daily treatment gets checked against the actual legal baseline of guaranteed liberties.
- **Free-Market Participation.** A person participates in the free market on their own terms, like anyone else.

10. Digital, Physical, Language & Meaning Accessibility

- **Screen Reader Compatibility.** Content and controls are checked for whether they're actually operable by screen-reading software.
- **Keyboard Navigation.** Every function is reachable and usable without a mouse, in a predictable order.
- **Color Contrast and Visual Clarity.** Sufficient contrast, and meaning never conveyed by color alone.
- **Captions and Transcripts.** Audio and video get accurate captions and transcripts, checked for real accuracy.
- **Alt Text and Image Description.** Images convey actual meaning to someone who can't see them.
- **Cognitive Load and Interface Simplicity.** Interface complexity itself is treated as a real potential barrier.
- **Focus Order and Visual Focus Indicators.** Keyboard focus stays visible and moves in a logical sequence.
- **Forms and Error Recovery.** Fields are labeled, and errors say exactly what's wrong and how to fix it.
- **Time Limits and Session Timeouts.** Extensions are actually reachable within the time available.
- **Motion and Animation Sensitivity.** Autoplay, parallax, and flashing content can be reduced or turned off.
- **Responsive and Zoom Compatibility.** Content stays usable when enlarged or resized.
- **Voice Control and Speech Input.** The interface works by voice for people who can't use a keyboard or mouse.
- **Assistive-Technology Compatibility.** Works with switch devices, eye-tracking, and alternative input hardware.
- **Consistent Navigation.** Navigation stays consistent across every page.
- **Audio Description.** Video carries a description of visual information for people who can't see the screen.
- **Downloadable Document Accessibility.** Files are as accessible as the pages that link to them.
- **Mobile and Touch Targets.** Touch targets are large and spaced enough for limited fine motor control.
- **Notification and Alert Accessibility.** Alerts reach assistive technology, not just a visual pop-up.
- **Physical Entry and Wayfinding.** A space can actually be entered, navigated, and exited

by someone using a wheelchair or cane.

- **Restroom and Facility Use.** Shared facilities are genuinely usable, tested as built, not just as approved.
- **Seating and Counter Height.** Service points work from a seated position and across a range of heights.
- **Parking and Transit Access.** Accessible parking and stops actually connect to the accessible entrance.
- **Emergency Egress.** Evacuation actually works for people with mobility, sensory, or cognitive differences, verified by real practiced drills.
- **Sensory Environment.** Lighting and noise levels are measured and adjusted for people with sensory sensitivities.
- **Service Animal Accommodation.** Policies and staff behavior actually accommodate service animals, checked directly, not just posted.
- **Plain-Language Translation.** Legal, medical, and official communications are actually rewritten plainly.
- **Multilingual Availability.** Critical information exists in the languages people actually speak.
- **Reading-Level Calibration.** Public content's actual reading level is checked against its intended audience.
- **Sign-Language Interpretation.** Real interpretation, not a substitute for it.
- **Jargon and Acronym Watch.** Ongoing check against jargon creeping back into public content.
- **Cultural Context and Idiom.** Content is reviewed by people outside the assumed cultural default.
- **Silence-and-Omission Meaning.** What's implied by what a communication doesn't say gets real human review.
- **Cognitive Load and Pacing.** A process can be completed at a pace that works for real memory and attention differences.
- **Instructional Sequencing.** Instructions are broken into steps small enough to actually follow.
- **Interruption and Resume.** A task can be paused and picked back up without losing progress.
- **Cost Barriers.** Checked against real population-need data, not assumptions about who can afford what.
- **Hidden Fees and Fine Print.** Costs are disclosed plainly.
- **Business Hours and Availability.** Service hours actually match when the people who

need them can access them.

- **Long-Term Maintenance.** An accommodation that worked at launch is checked to still work after a redesign or staff turnover.
- **Situational Disability.** Designs are tested for temporary and context-driven limitations, and treated with the same seriousness during a genuine crisis.
- **Low-Bandwidth and Older Devices.** Tested under real, degraded conditions, not ideal ones.
- **Cross-Platform Parity.** Accessibility features exist equally across every platform.
- **Companion and Support Person Access.** A person can bring a support person or interpreter into a process.
- **Staff Training and Attitude.** Real encounters, not just training-completion records, are checked.
- **Accommodation Request Process.** Requesting an accommodation is checked for whether the request itself is a barrier.
- **Appeal and Recourse.** The recourse path itself is tested for accessibility.
- **Vestibular and Motion Sensitivity.** Movement requirements account for balance disorders.
- **Neurodivergent Interaction Norms.** Expected interaction styles are checked for whether they're actually necessary, or just assumed defaults.
- **Disclosure Necessity.** A request alone is enough — nobody is forced to explain the nature of a disability just to get an accommodation.
- **Age-Related Capability.** Aging is treated as its own category, not folded silently into disability.
- **Discoverability of Accommodation.** People can actually find out an accommodation exists in the first place.
- **Lived-Experience Feedback.** An ongoing channel for real users to report what isn't working, separate from a one-time audit.
- **Religious Observance Scheduling.** Deadlines and hours account for religious observance and holidays.
- **Dress and Appearance Accommodation.** Religious and cultural dress and appearance are actually permitted in practice.
- **Dietary Accommodation.** Food-related processes account for religious and cultural restrictions.
- **Naming and Identity Convention.** Forms and systems accommodate names, honorifics, and identity conventions outside a default format.
- **Caregiver Proxy Access.** A caregiver can act on someone's behalf when needed,

scoped and time-bound, never a permanent override.

- **Childcare and Dependent Presence.** A process works for someone who can only attend with a child present.
- **Family Leave Continuity.** A process doesn't break down when the primary person is temporarily replaced by family during a crisis.
- **Multigenerational Communication.** Non-digital channels reach the household member with the least tech comfort.
- **Trauma-Informed Interaction.** Processes involving retelling or documentation are designed to avoid re-traumatizing.
- **Predictability and Control.** A person has real visibility into what happens next and real control over pacing.
- **Safe Exit.** A person can step away from an overwhelming interaction without penalty.
- **Credit and Financial History Barriers.** Processes are checked for assumptions about financial history that quietly exclude.
- **Documentation Availability.** Requirements don't assume a stability many people don't have.
- **Digital Divide.** Processes don't assume home internet, a smartphone, or an email address.
- **Synchronous vs. Asynchronous.** Real-time interaction is never forced where an asynchronous option would serve more people.
- **Written vs. Verbal Preference.** People choose the format that actually works for them.
- **Response Latency Tolerance.** Processes never assume fast responses that exclude people who need more time.
- **Consent Comprehension.** Consent is checked as actually informed, not just signed.
- **Rural and Remote Access.** Services don't assume proximity to infrastructure people in rural areas don't have.
- **Travel Burden.** The real cost, in time and money, of reaching a service in person is measured directly.
- **Tactile and Braille Access.** Physical materials offer a real tactile or braille alternative where needed.
- **Auditory Environment.** Background noise and acoustics are checked against hearing aids and lip-reading.
- **Scent and Chemical Sensitivity.** Fragrance and chemical exposure in a space is checked against real sensitivities.
- **Alternative Identity Verification.** People without standard ID have a genuinely easier path, not an equally hard substitute.

- **Life Transition Accommodation.** A process accounts for someone navigating major disruption, not just steady-state capacity.
- **Seizure-Safe Design.** Flashing and strobing patterns are tested and avoided for photosensitive epilepsy.
- **Chronic Illness Pacing.** A process accounts for fluctuating energy and fatigue.
- **Medication Schedule Compatibility.** Appointment times and requirements are checked against real medication timing needs.
- **Pregnancy and Postpartum Accommodation.** Real physical and cognitive changes are accounted for, not a generic template.
- **Recovery and Sobriety Accommodation.** A process never inadvertently pressures someone in recovery.
- **Voting and Civic Participation.** Civic processes are genuinely, not just technically, accessible.
- **Housing Application.** Applications don't assume documentation or credit history that excludes vulnerable applicants.
- **Employment Interview and Workplace.** Hiring and daily work are accessible end to end, checked as a full pipeline.
- **Healthcare Appointment Access.** Scheduling, intake, and the appointment itself are all checked together.
- **Immigration Status Consideration.** A process doesn't assume documentation status that excludes.
- **Incarceration and Reentry Access.** A record never becomes a permanent, unexamined exclusion.
- **Packaging and Container Accessibility.** Packaging can be opened by people with limited grip strength or dexterity.
- **Signage Clarity.** Wayfinding signage is itself checked for legibility, separate from the physical path.
- **Queue and Waiting Accommodation.** Long waits have a real accessible alternative, not a relocated burden.
- **Device and Equipment Size.** Spaces and furniture accommodate a real range of mobility-equipment sizes.
- **Weather and Climate Sensitivity.** Heat and cold exposure is checked against real temperature-regulation conditions.
- **Single-Channel Dependency.** A service is never reachable through only one channel with no alternative.
- **Onboarding and First Use.** The very first encounter with a service is itself checked for

accessibility.

- **Error Message Tone.** Error messages explain what happened plainly, without assigning blame.
- **Data and Privacy Comprehension.** People actually understand what happens to their data, not just that a policy exists.
- **Return and Warranty Accessibility.** Returns and complaints are as accessible as the original purchase.
- **Gender Identity Form Accessibility.** Forms accommodate identities outside a binary default.
- **Pronoun and Address Accuracy.** Stated pronouns and preferred address carry through a system consistently.
- **Assistive Device Interoperability.** A person's own existing devices work with new systems, rather than requiring proprietary replacements.
- **Cross-Organization Portability.** An accommodation established in one part of an organization doesn't have to be re-established from scratch elsewhere.
- **Learning Differences.** Materials account for dyslexia, dyscalculia, and other specific learning differences directly.
- **Test and Assessment Accommodation.** Assessment format measures the actual skill being tested, not an unrelated disability.
- **Multiple-Modality Instruction.** The same material is available through more than one sense or format.
- **Pacing Flexibility in Learning.** A learner can move faster or slower without penalty.
- **Financial Literacy and Jargon.** Financial products are explained so an average person can actually act on them.
- **Autopay and Recurring Charge Accessibility.** Recurring charges are easy to see, understand, and cancel — cancellation as easy as signup.
- **Predatory Design Detection.** A process is checked for whether it's structured to exploit confusion or urgency rather than support informed choice.
- **Vehicle Boarding and Securement.** Boarding and securing mobility equipment actually works in practice.
- **Real-Time Transit Information.** Delays and disruptions reach people who rely on advance notice.
- **Ride-Share and On-Demand Accessibility.** On-demand transportation actually accommodates mobility equipment and service animals.
- **Home Modification and Adaptability.** A living space can be adapted as needs change, without a full move.

- **Shared Living Space.** Communal spaces are checked with the same rigor as private units.
- **Utility and Appliance Accessibility.** Everyday controls are operable across a range of physical abilities.
- **Crisis Communication Accessibility.** Emergency alerts reach people who are deaf, blind, or have limited English proficiency.
- **First-Responder Interaction.** Field encounters, not just training records, are checked for real competence with disabled individuals.
- **Disaster Shelter Accessibility.** Emergency shelters are checked on-site, not by a pre-approved list.
- **Re-Assessment Over Time.** An accommodation is revisited as need changes, never fixed once and forgotten.
- **Transition Between Life Stages.** Accommodations transfer as someone moves between child and adult services.
- **Death and Estate Process Accessibility.** Processes survivors must navigate after a death are themselves accessible during grief.
- **Self-Reported vs. Observed Gap.** The gap between what an organization believes it provides and what users actually experience gets measured directly.
- **Third-Party Audit Independence.** Accessibility claims are verified by someone genuinely independent of the organization.
- **Accessibility Statement Accuracy.** A published statement is checked against actual practice.
- **Complaint Pattern Aggregation.** Recurring complaints across time and departments are caught, even where no single complaint would reveal the pattern.
- **Cost of Exclusion.** What exclusion actually costs a business is quantified directly, in lost customers, legal exposure, and reputation.
- **Meeting and Collaboration Accessibility.** Meetings themselves — pace, format, real-time-only discussion — are checked for who they exclude.
- **Performance Review Accommodation.** Evaluation criteria account for accommodations already granted, rather than penalizing their visible effects.
- **Promotion and Advancement Parity.** People using accommodations advance at the same rate as those who don't.
- **Remote and Hybrid Work Equity.** Remote options come with equal access to information and advancement.
- **Disabled-User Inclusion in Design.** People with disabilities are actually involved in designing a product, not just tested on afterward.

- **Assumption Audit.** A design's unstated assumptions about a "typical" user's body, senses, and cognition get checked before they calcify.
- **Public Visibility and Privacy Balance.** A person receives an accommodation without it being visibly announced against their wishes.
- **Cross-Border Standard Conflict.** The strictest applicable accessibility standard is the default, across every country a business operates in.
- **Translation Fidelity.** Translated content preserves the original's actual meaning and legal force.
- **Haptic Feedback Accessibility.** Vibration feedback exists as a real alternative channel, not just a supplement.
- **AI-Generated Content Accessibility.** AI-generated summaries and descriptions are checked for accuracy with the same rigor as any other content.
- **Accessibility Ownership and Accountability.** A specific person or role is actually responsible for outcomes — not everyone's job and no one's.
- **Budget and Resourcing Reality.** Accessibility commitments are checked against whether they're actually funded.
- **Vendor and Third-Party Accessibility.** A business's commitments extend to the vendors and platforms it relies on.
- **Legacy System Remediation.** Older systems get an actual plan to be brought current, not permanent grandfathering.
- **New-Feature Accessibility Gate.** Accessibility is evaluated before a feature ships, never retrofitted after complaints.
- **Low-Vision Magnification.** Magnification options exist distinct from full screen-reader reliance.
- **Blindness-Specific Navigation.** Physical and digital wayfinding works end-to-end with no vision at all.
- **Deafblind Communication.** Tactile sign language and braille displays exist together, combined.
- **Deafness-Specific Environment.** An environment fully supports profound deafness, not just amplification fixes.
- **Intellectual Disability Support.** Materials are genuinely comprehensible, checked beyond generic plain-language fixes.
- **Mobility Equipment Specifics.** Accessibility is checked separately for wheelchair, walker, cane, and prosthesis users.
- **Multiple-Disability Intersection.** Accommodations are checked for whether one conflicts with or undoes another.

- **Outdoor and Natural Space Accessibility.** Parks and trails offer genuine access, not a paved entry that dead-ends.
- **Recreation and Sports Accessibility.** Real adaptive participation paths exist, not just permission to attend.
- **Retail and Shopping Accessibility.** The full shopping experience — aisles, fitting rooms, checkout — works end to end.
- **Library and Bookstore Accessibility.** Reading materials and browsing are accessible across formats.
- **Museum and Cultural Institution Accessibility.** Exhibits themselves are genuinely accessible, not just the building's entrance.
- **Gaming and Entertainment Accessibility.** Actual gameplay is accessible, not just packaging.
- **Accessibility Tool Usability.** The accommodation tools themselves are checked for usability.
- **Adaptive Clothing and Fashion.** Clothing accounts for different bodies and dressing abilities.
- **Voting Machine Accessibility.** Equipment itself is usable independently and privately.
- **Medical Equipment Interface.** Devices are usable by the patients who depend on them, not just clinicians.
- **Currency and Payment Handling.** Physical money and payment systems are handled independently.
- **Loyalty and Subscription Management.** Cancellation is as accessible as signup.
- **Accessibility Complaint Legal System.** The legal and regulatory system meant to enforce accessibility is itself accessible to use.
- **AI Assistant and Chatbot Accessibility.** Voice assistants and chatbots don't exclude speech, cognitive, or sensory differences.
- **Body Size Accommodation.** Furniture and spaces accommodate a real range of body sizes.
- **Refugee and Displacement Context.** Accessibility provisions hold up in emergency and displacement contexts.
- **Accessibility Certification Integrity.** Displayed certifications are actually earned and current.
- **School-Specific Accommodation.** K-12 settings specifically implement accommodations, not generic adult frameworks applied downward.
- **Ticketing and Reservation Accessibility.** Accommodations can be requested at point of purchase, not after arrival.

- **Physical Modification Lead Time.** A realistic timeline is communicated for physical fixes, not an open-ended wait.
- **Elevator and Lift Accessibility.** Call buttons, door timing, and audio floor announcements are checked as they actually work.
- **Ramp Gradient and Stair Alternatives.** Ramp slope and handrails are genuine, and stairs always have a real alternative.
- **Door and Entry Mechanisms.** Weight, opening force, and handle style don't exclude limited-grip users.
- **Restaurant Menu Formats.** Menus exist in large print, braille, and simplified formats.
- **Lodging and Hotel Room Accessibility.** The room itself is checked, not just its label.
- **Airport and Air Travel Accessibility.** The full experience works end to end, including the handoffs between stages.
- **Aquatic Facility Accessibility.** Pool lifts and beach wheelchairs exist and are actually maintained.
- **Fitness Facility Accessibility.** Gym equipment and classes have genuine adaptive options.
- **Self-Checkout and Kiosk Accessibility.** Self-service kiosks are usable by someone who can't see, reach, or stand at a fixed height.
- **Authentication and Security Accessibility.** Two-factor authentication and CAPTCHAs don't lock out visual, motor, or cognitive differences.
- **Video Call and Lip-Reading Support.** Camera framing and lighting support lip-reading and sign interpretation.
- **Quiet Space and Sensory Breaks.** A real, dedicated quiet space exists — not just tolerance for stepping outside.
- **Adaptive Equipment Returns and Repair.** Returns and repairs are handled with the urgency the equipment's necessity demands.
- **Insurance Coverage for Accommodation.** Costs are actually covered, not left entirely on the individual.
- **Government Benefits Application.** Applying for benefits is checked against the population it serves, not an idealized applicant.
- **Court and Legal Proceeding Accessibility.** Courtrooms and filings are themselves accessible.
- **Jury Duty Accessibility.** Notice, selection, and the courtroom itself are genuinely accessible.
- **Incarceration Condition Accessibility.** Conditions during incarceration itself meet real accessibility needs.

- **Adoption and Foster Care Process.** Applicant and child needs are both accommodated.
- **Dating and Relationship Platform Accessibility.** Platforms are usable by, and never stigmatize, people with disabilities.
- **Seasonal and Weather Maintenance.** Ice, snow, and debris clearing actually keeps accessible routes usable.
- **Small-Business Accessibility Burden.** Compliance costs are calibrated so small businesses aren't functionally exempted.

11. Institutional Accountability

- **Trustee and Staff Conduct Patterns.** Actions get tracked across years, catching patterns invisible in any single transaction.
- **Real Vetting, Every Handoff.** An incoming trustee or officer demonstrates real understanding — not just a signature.
- **No Dormancy Hiding as Activity.** A trust or program that's gone quiet gets caught, even while it looks active on paper.
- **Every Advisor, Accountable.** Every professional who's touched the trust — what they advised, whether it was followed — stays on record.
- **Vendor Self-Dealing Detection.** A vendor certifying compliance and also selling the remediation gets caught as a structural conflict.
- **Fee Legitimacy.** A fee is checked against substance, not just its label — never a disguised charge for something that should be free.
- **Investigations, Started Without Permission.** A person can open their own investigation into the trust whenever they judge it necessary.
- **A Real Way to Remove a Bad Actor.** An actual, working pathway to challenge and remove a trustee or caretaker abusing their authority — with teeth, not just a record.

12. The Flagship: Emergency & Narrative Control

The Emergency-Noise & Narrative Integrity Instrument.

The instrument at the center of both catalogs. It does three things, automatically, every time:

1. Captures a person's own account of what's happening, in real time, before any institution's version of events can be assembled around a declared emergency.
2. Checks whether the timing of a declared emergency lines up with something else — a publication, a disclosure, a filing — that someone had reason to want buried.

3. Protects any investigation or challenge already underway from being paused, deprioritized, or quietly buried the moment a new emergency gets declared.
- **Emergency Exception, Proven Not Assumed.** Any moment normal process was skipped "because of an emergency" has to prove that emergency was real and time-limited — genuine emergency response never quietly becomes a permanent workaround.
 - **Wellbeing, Checked Especially When It's Least Convenient.** A person's actual conditions and safety are independently verified — and that verification tightens, rather than pausing, during a declared crisis.
